ADIANA PERMANENT CONTRACEPTION

Adiana Permanent Contraception

Patient selection criteria*

Adiana Permanent Contraception is indicated for women who desire permanent birth control (female sterilization) by occlusion of the fallopian tubes.

Appropriate candidates are women who do not wish to have children in the future and who meet any of the following criteria:

- Desire permanent contraception
- Wish to avoid the uncertainty and inconvenience of temporary contraception
- Are concerned about the long-term use of hormones for birth control
- Wish to avoid surgery
- Have an allergy to nickel
- May require future gynecological tests and procedures (endometrial biopsy, D&C, MRI, endometrial ablation, etc.)

Age-related considerations

The Adiana procedure has been studied in women ages 18 to 45, however, it should only be performed on patients who are certain that they do not want children in the future. The safety and effectiveness of this procedure has not been demonstrated in patients under the age of 18 or over the age of 45.

Patient exclusion criteria (contraindications)

The Adiana System should not be used in a patient who:

- Is uncertain about her desire to end fertility
- Has clinical evidence of an active pelvic infection or history of a recent pelvic infection
- Has intra-uterine pathology which would prevent access to either tubal ostium or the intramural portion of either fallopian tube (such as large submucous fibroids, uterine adhesions, apparent uni- or bi-lateral proximal tubal occlusion, suspected unicornuate uterus, etc.)
- Is pregnant or suspects pregnancy
- Is currently less than three months since her last pregnancy
- Has previously undergone a tubal ligation
- Is currently taking immunosuppressive medications (e.g. steroids)
- Has a known allergy to contrast media
